

User Guide

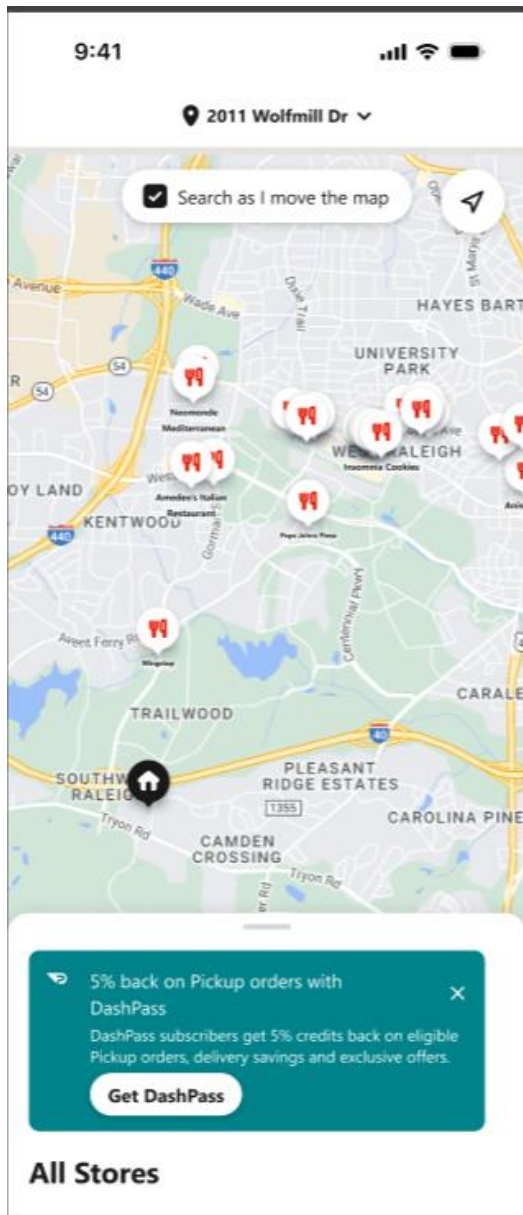

Background

- Our product is an automated delivery management system designed to revolutionize the food delivery experience. It addresses the problem of inefficiencies in traditional food delivery methods, resulting in high operating costs for restaurants and lengthy wait times for customers. Our goal is to optimize delivery operations, reduce wait times, and improve customer satisfaction.

Details

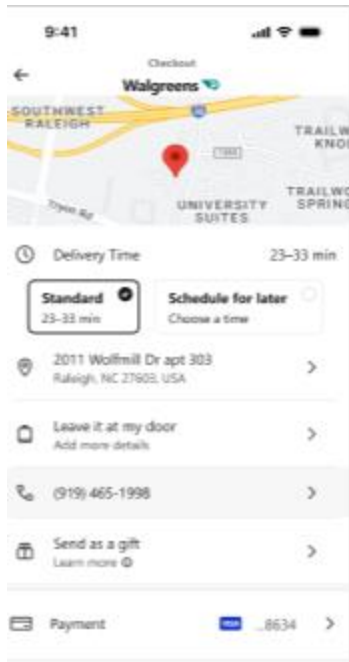

Feature 1: Real-time Tracking

- **Functionality:** This feature allows both restaurants and customers to monitor the status and location of their orders in real time.
- **Access:** Users can access this feature from the order details page in our app.
- **Known Issues:** There are currently no known issues with this feature. Any updates or upcoming features will be communicated as they arise.
- **Visual Element:**

Feature 2: Intelligent Routing

- **Functionality:** This feature uses advanced algorithms to optimize delivery routes, reducing delivery times and fuel costs for restaurants.
- **Access:** This feature is automatically applied to all deliveries and does not require any specific action from the user.
- **Known Issues:** There are currently no known issues with this feature. Any updates or upcoming features will be communicated as they arise.
- **Visual Element:**

Feature 3: Automated Notifications

- **Functionality:** This feature sends automated notifications to customers
- **Access:** Users will receive these notifications automatically if they have allowed notifications from our app in their device settings.
- **Known Issues:** There are currently no known issues with this feature. Any updates or upcoming features will be communicated as they arise.
- **Visual Element:**
